**FOR IMMEDIATE RELEASE
MARCH 5, 2020**

READY TO SPRING FORWARD? TIME CHANGE THIS WEEKEND

Change your clocks and change the batteries in your smoke and CO detectors

MUSCATINE, Iowa – Daylight Saving Time (DST) begins at 2 a.m. Sunday, March 8, 2020, as Iowans “spring” forward and move their clocks up one hour. The Muscatine Fire Department reminds residents that this is also a good time to change the batteries in smoke and carbon monoxide detectors, to test the alarms, and to remind family and friends to do the same.

“The bi-annual changing of time is the perfect opportunity to make sure that your smoke and carbon monoxide detectors are up-to-date and in working order,” Mike Hartman, Assistant Fire Chief, said.

If you do not have both of these detectors ... purchase and install them.

Worn out or missing batteries are the most commonly cited reason for non-working smoke alarms, but changing smoke alarm batteries at least once a year, testing those alarms, and reminding others to do the same is the simplest and most effective way to reduce injury or death from fire.

The International Association of Fire Chiefs (IAFC) also recommends replacing smoke alarms in homes every 10 years and those that actually speak warnings are more effective in saving lives than those alarms that just beep.

“Studies have shown that children, especially, will sleep through an alarm that beeps because it sounds a lot like an alarm clock,” Hartman said. “The alarms that actually speak to you have been shown to greatly increase a person’s ability to escape a fire.”

The Fire Department also recommends photoelectric alarms with a 10-year lithium battery and to mark the date of installation on the detectors.

“These detectors do not last forever,” Hartman said. “It is important that you check the date on the detectors and replace those that are seven years old or more.”

Carbon monoxide detectors are required in Iowa homes, apartment buildings, and new construction projects. They should be replaced every seven to eight years according to the IAFC.

“Basically, every residence that has fuel-fired heater or appliance, fireplace, or attached garage will be required to have CO detectors,” Hartman said.

Carbon monoxide is an odorless, colorless, and tasteless gas that is harmful when breathed because it displaces oxygen in the blood and deprives the heart, brain, and other vital organs of oxygen. Carbon monoxide poisoning (breathing in large amounts of CO) can cause serious tissue damage, loss of consciousness, or suffocation in minutes without any warning.

The death rate per 1,000 reported home fires was more than twice as high in homes that did not have any working smoke alarms (12.3 deaths per 1,000 fires), either because no smoke alarm was present or an alarm was present but did not operate, as it was in homes with working smoke alarms (5.7 per 1,000 fires).

Smoke & carbon monoxide alarms are life saving device, and having working smoke & carbon monoxide alarm dramatically increases your chance of survival from a fire or carbon monoxide emergency.

Although it seems like a hassle, it's better to get into the practice of changing your smoke/carbon monoxide detector batteries when you change your clocks, than to wait until the telltale beeping of a dying battery at two in the morning. Many times this beeping ends up in the removal of the battery or the detector all together, thus rendering the detector useless.

Fires & carbon monoxide emergencies are real and very scary. A working smoke detector performs its functions around the clock and alerts you and your loved ones to a fire or carbon monoxide emergency even while you are asleep.

When the alarm sounds you should "Get out & Stay Out", then call "911" and advise the MUSCOM dispatcher of the problem.

If you need assistance changing or testing your smoke alarms and carbon monoxide detectors, please contact the Muscatine Fire Department.
